

## Clicker 8

# How to Adapt Speech and Highlighting Options for Writing and Reading Activities (Options > Speech)

### Introduction

In this tutorial you will learn how to make customizations to the Speech Options to personalize auditory feedback for individual students as they complete writing activities on a Clicker Document. The Voice and Highlight settings will also apply as students complete reading activities.

To adjust the Speech Options, open Clicker 8 and select Options in the top menu. From the list of options, click on the Speech icon to your left.

### Learning Objectives

Completion of this tutorial will give you experience with:

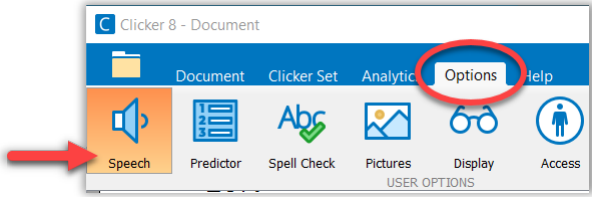

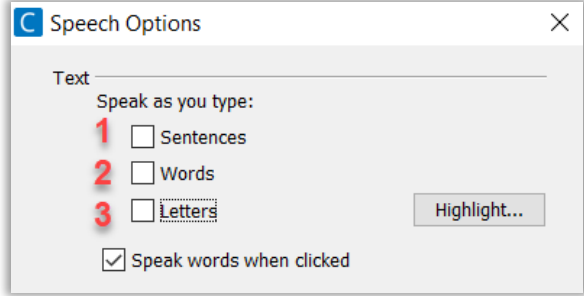

- Customizing document preferences to personalize speech/ audio feedback options for individual students.

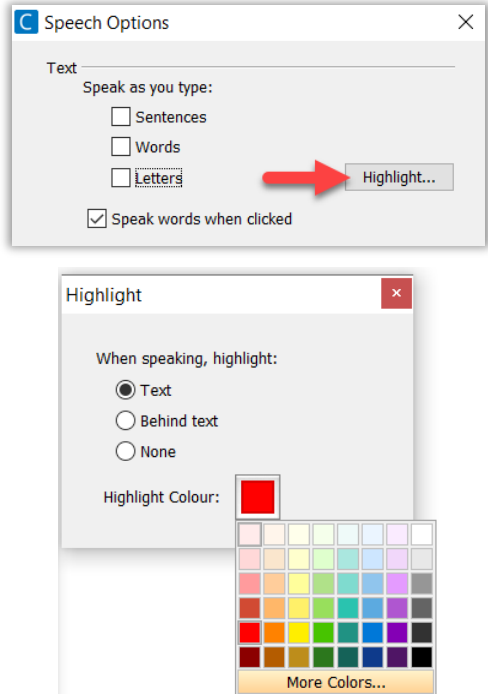

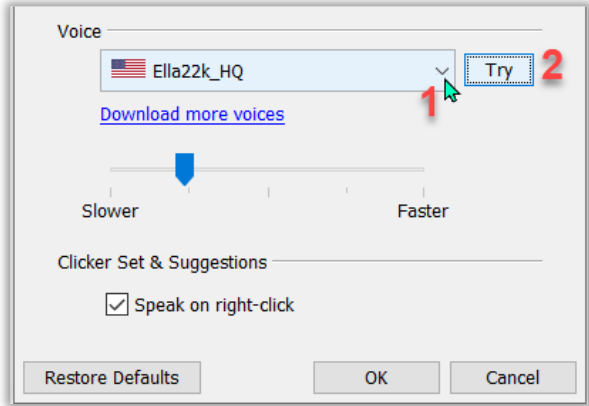

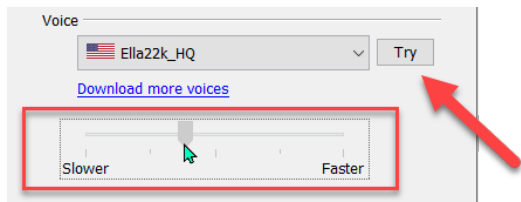

### This tutorial assumes that you have

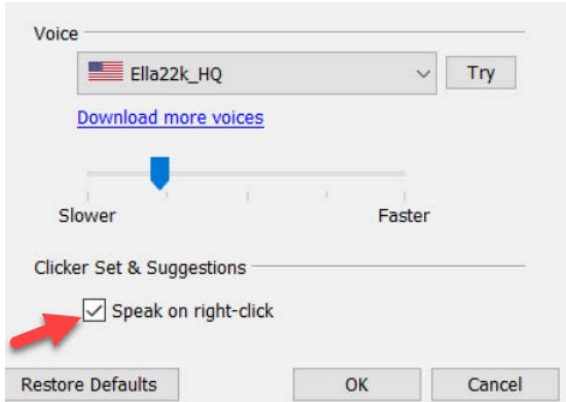

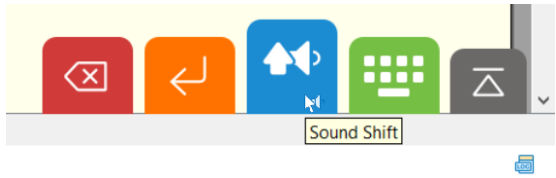

- Clicker 8 installed on a Mac/ PC.
- Experience launching Clicker 8 and opening a document.

### Case Study

Amanda and Tony are in Grade 3. Amanda has a mild to moderate sensorineural hearing loss and Tony has a visual impairment. Amanda has challenges hearing certain frequencies and struggles with reading text. Tony has difficulty seeing what is written. The school-based team would like both students to use Clicker 8 to become more independent in completing writing activities.

<p>1</p>	<p>With the document open, click on <b>Options</b> at the top of the screen. Click on the <b>Speech</b> icon.</p>	
<p>2</p>	<p>Because Clicker 8 is a talking word processor, you can adjust what the students hears by adjusting feedback as students type.</p> <ol style="list-style-type: none"> <li><b>1. Sentences:</b> The whole sentence will be read when punctuated at the end. This allows students to self-assess and self-correct their writing by hearing the sentence being read back.</li> <li><b>2. Words:</b> Each word will be read when space is entered. Supports phonetic spellers. Students who are visually impaired can also benefit from the auditory feedback.</li> <li><b>3. Letters:</b> Reads each letter as students type. This feature supports students who are at a pre-literacy stage and are learning that letter sounds are associated with symbols and have meaning.</li> </ol> <p>Note that more than one option can be selected to provide the auditory feedback the student needs.</p>	

<p>3</p>	<p>If you have a student with a vision impairment, click on the <b>Highlight</b> button and you will be able to verify the best colour to use for their visual condition.</p> <p>Struggling readers and students who have difficulty focusing the text may also benefit from highlighting.</p> <p>Depending on the student, select:</p> <ul style="list-style-type: none"> <li>• Highlight the <b>text</b>,</li> <li>• Block-highlight <b>behind text</b>, or</li> <li>• <b>None</b></li> </ul>	
<p>4</p>	<p>Some students with a sensorineural hearing loss may benefit from selecting a voice with lower frequency. At this time, you may want to give some autonomy to your students and allow them to pick a male or a female voice.</p> <ol style="list-style-type: none"> <li>1. Click on the <b>dropdown</b> arrow and <b>select a voice</b>.</li> <li>2. Click on the <b>Try</b> button to listen to the selected voice. More voices can be downloaded from the Cricksoft website.</li> </ol>	
<p>5</p>	<p>Students who experience auditory processing difficulties may benefit from a slower reading speed.</p> <p>Use the <b>Speed slider</b> to adjust the speed. Click <b>Try</b> to listen to it.</p>	

<p>6</p>	<p>When <b>Speak on right-click</b> is selected, words suggested in the Predictor window and words in Clicker grids will be read out loud on right click.</p> <p>Words in other places will be read out loud on right-click without selecting this option.</p> <p>Click <b>OK</b> to save the customizations. Note the settings will be applied to reading activities as well.</p>	
<p>7</p>	<p>To have words read out loud on a normal click, use the <b>Sound Shift</b> feature on the on screen-keyboard located on the bottom right of the screen.</p> <p>Click on Sound Shift, and then click on the word to be read out loud.</p>	

**Tip...**

To minimize the number of steps needed for auditory feedback, you may activate “right click on dwell.” With this option, students can hover the cursor over the target word for a length of time for it to be read aloud.

To use this feature, under the **Options** ribbon, select **Access > Access Method**. From the dropdown menu, select **Eye Gaze/Mouse Dwell**. Click on **Advanced**, and then select **Right-click on dwell**. Adjust the dwell time to suit the student’s needs.
